

TradeNet Version 3.1

About TradeNet Version 3.1

IPACS TradeNet Version 3.1- a Singapore Trade and Customs Declaration EDI software, allows logistics service providers and manufacturers to electronically submit trade documents to Trade Development Board, Customs & Excise Department, Controlling agencies and other government bodies.

IPACS TradeNet Version 3.1 provides users with the ability to submit electronic trade declaration quickly and efficiently. It enables the organization to meet the modern day challenges of a paperless working environment, and abiding by international EDI UN/EDIFACT standards.

Key Features of TradeNet Version 3.1

- Ability to declare consignment from different origin in one declaration
- Includes ASEAN Harmonized Tariff Nomenclature (AHTN)
- Newly updated fields, such as removal of health warning for tobacco cargo and place of application
- New message specification known as JNTDEC3

Key Benefits

- User friendly systems using Graphical User Interface (GUI)
- Increase productivity through electronic submission of IE Singapore/JNT/CED declarations concurrently
- Enhance visibility of sales performance with updated management reports
- Minimize data storage capacity with built in housekeeping facilities
- Modular systems that is designed for small to large enterprise
- Improve accuracy with multiple address routing with data validation capabilities
- Integrated with IPACS Logistics/2000 and Internet Cargo Management Systems
