

A close-up photograph of a computer keyboard with a glowing, semi-transparent globe overlaid on top. The globe has a grid pattern and is illuminated from below, creating a warm, orange glow.

## IPACS successfully launches our Tradenet Enterprise II V3.1, our latest Internet Tradenet Solution

**Over 100 customers recently attended IPACS' Tradenet Enterprise II V3.1 product seminars held on 27th and 28th July 2005.**

**IPACS Tradenet Enterprise II V3.1** is an approved Singapore Customs Clearance solution that has been specially designed for a multi-user, multi-branch and office environment where the application can be centrally hosted to provide secured user accessibility across the whole organization via the Internet.

Developed on Microsoft's latest internet technology ( .Net) with full integration with their MS Office facilities, IPACS Tradenet Enterprise II V3.1 increases efficiency & productivity with enhanced capabilities that include features like automatic emailing & faxing out of Tradenet permit reports & CCPs. Furthermore, it has been built to provide increased user security, flexibility, user friendliness etc..

With the ability to be hosted on a central server yet accessed by different branches and offices, it creates efficiency with its consolidated Tradenet Summary Reporting. Its more flexible interface capability (XML) allows seamless integration with your external system to minimise double data entry & human errors.
